ABSTRACT

Detailed statistics on trends in the U.S. supply and geographic distribution of personnel in eight health occupations, along with current data on selected professional characteristics, are presented. Statistical tables include combined data for the eight occupations, and groups of tables for the individual health occupations: physicians (both M.D.'s and Doctor of Osteopathy), dentists, optometrists, pharmacists, podiatrists, veterinarians, and registered nurses. The multiple occupation tables provide national trend and current figures for personnel supply and ratio to population, and certain data on percent distribution by state. In addition, related ratio and percent distribution data are presented by metropolitan areas and non-metropolitan counties. The age distribution of personnel in the eight occupations is also covered. Data are included on national trends in active personnel supply during 1950-1980, together with personnel-to-population ratios. Also provided for all eight occupations is the geographic distribution of active personnel, and their ratio to population, by region, division, and state, as of 1970, 1975, and 1980. Additional considerations include foreign medical graduates, practice characteristics by specialty, active nonfederal M.D.'s, and health occupation shortage areas. (SW)

Foreword

This report provides detailed statistics on trends in the national supply and geographic distribution of personnel in eight health occupations, together with current data on selected professional characteristics. It was prepared by the Division of Health Professions Analysis, Bureau of Health Professions, Health Resources Administration, primarily as a reference document, with the tables designed to be self-standing and self-explanatory. Every attempt has been made to present the data in clear and logical table designs, including accurate and informative titles and column headings, to facilitate use of the tables by readers. Only minimal descriptive or explanatory text is included.

It is important for the reader to note that many of the statistics in the report are estimates made by the staff of the Division of Health Professions Analysis (DHPA). In many cases it was necessary to adjust available published data to make them comparable and internally consistent, and to bring them more up to date. In nearly all cases, 1979 and 1980 data were estimated by DHPA staff in early 1981, based on a variety of approaches and methods. Since this is an ongoing activity, these estimates are undergoing revision and refinement as new information becomes available and further analyses are conducted. Subsequent DHPA publications will embody such changes. A more complete discussion of the nature and content of this report appears in the Introduction.

It is believed that this report will provide a ready working reference for analysts, policymakers, health planners, administrators, investigators, and others concerned with the supply of health personnel. It is hoped, too, that the present effort will stimulate data gathering and further study by others.

This report was prepared by James N. Ake, statistician, and Donald W. Johnson, D.D.S., M.P.H. Frank M. Holz, technical information specialist, made major contributions to this report. Dianna L. Jesse typed the numerous statistical tables.

Howard V. Stambler
Director
Division of Health Professions Analysis

Introduction

The statistical tables on the health occupations covered in this report are organized in eleven major groupings, beginning with a set of tables which presents combined data for all the occupations. This is followed by groups of tables of data on the individual health occupations: Physicians (both M.D.'s and D.O.'s), dentists, optometrists, pharmacists, podiatrists, veterinarians, and registered nurses. Then follow two groups of tables which, because of certain special aspects, are placed in Appendices. A very brief Overview section precedes the actual tables.

Health Personnel Supply

The multiple occupation tables give national trend and current figures for personnel supply and ratio to population, and certain data on percent distribution by State. Also, related ratio and percent distribution data are presented by metropolitan areas (Standard Metropolitan Statistical Areas) and non-metropolitan counties (according to size of central city). There is also one table on the age distribution of personnel in the eight occupations.

Certain statistics are provided, in similar tables, for each of the individual occupations. Data are provided on national trends in active personnel supply from 1950 through 1980, together with personnel-to-population ratios. Also presented for all eight occupations is the geographic distribution of active personnel, and their ratio to population, by region, division, and State, as of 1970, 1975, and 1980.

There are a number of tables which provide certain types of statistics for only a few occupations and, in a number of instances, for only one occupation. The national trend tables for physicians (both M.D.'s and D.O.'s) and for dentists give data not only on active personnel but also on the total supply (i.e., including physicians and dentists who are retired or otherwise not professionally active).

A table gives trend data through 1978 on the number and percent distribution of physicians (M.D.'s) by metropolitan areas (SMSA's) and non-metropolitan counties (according to county population). For both physicians (M.D.'s) and dentists, the 1979 ratio of active practitioners to population is presented for metropolitan areas (SMSA's) and non-metropolitan counties (according to size of central city), by region, division, and State.

Trend data through 1980 are given for physicians (M.D.'s) and for dentists in specialty practice, plus related specialist-to-population ratios. In addition, statistics are presented for physicians (M.D.'s) active specifically in primary patient care, together with their ratio to population.

One table shows the trend in the proportion of foreign medical graduates (FMG's) in the total U.S. supply of physicians (M.D.'s). Two other tables show the number and proportion of FMG's among all active physicians (M.D.'s), by type of practice (including individual specialties).

The tables in Appendix I give the State by State counts of active non-Federal physicians (M.D.'s) and their ratio to population in 1970, 1975, and 1978, by general and family practice and by selected specialty practice, such as pediatrics, psychiatry, and pathology. Appendix II consists of three tables on Federally-designated health manpower shortage areas, with estimates of additional practitioners needed in certain health occupations, as of the end of 1980.

Practice Characteristics

A table presents data for 1978 on number and percent distribution of all active physicians (M.D.'s), and also separately for FMG's, by activity and place of practice, e.g., patient care (office-based and hospital-based), teaching, or research. Another table presents the 1978 number and percent distribution of males and females among active physicians (M.D.'s), by specialty group for patient-care physicians, and by professional activity for other physicians. Estimated data are also given in separate tables on the 1980 number and percent distribution of osteopathic physicians (D.O.'s) by occupational status, of dentists by primary type of employment, and of veterinarians by type of employer.

A group of five tables presents data on various characteristics of a physician's practice--general practice and selected specialty practice--including average number of patient visits per week, average time patients wait for an appointment and waiting time in the physician's office. Also given is average annual physician net income, both actual and adjusted for inflation.

Data are presented for independent dentists, on number of patient visits per week, and on average annual income.

Clarifications and Comment

It is important for the reader to note that there are significant problems with the non-comparability of available data for the eight health occupations covered in this report. Among these problems are data gaps, the different timing of surveys, non-compatible definitions, and especially differences in data from different sources. In order to achieve improved comparability of data on supply trends and current supply distribution, many adjustments in the data obtained from the original sources were deemed necessary. For example, 1978 data on physicians (M.D.'s), the latest available at the time of the compilation of this report, were updated to 1980 and adjusted to include physicians of unknown address or unknown activity. Such 1980 estimates are generally made for large aggregates of health personnel, such as personnel in groups of medical specialties or in the largest of the specialties.

Data on nurses present another problem of comparability. Traditionally, estimates for registered nurses have been compiled as of January 1, which results in a full year difference with the statistics on other health occupations, which use December 31 of the same year. Therefore, it was decided to depart from previously published data on nurses and, instead, to use January 1 of the year following the year listed in the tables as the effective date for nursing data in this report, in order to reduce the difference in effective date to only one day instead of a full year. For

example, by this adjustment or shift of date, nursing data as of January 1, 1981 have virtually the same effective date as data compiled as of December 31, 1980 for the other health occupations in this report. Such nursing data are shown as being for 1980, with appropriate footnotes.

There are other caveats and precautions the reader should keep in mind. For example, comments and footnotes regarding trend data as given in some sources were deemed too numerous or detailed for this report, and were either simplified or omitted. The user who wants all such detail is advised to consult the source identified in the table itself.

The counts of population used in this report are not the same in all cases and vary with the type of health personnel and the nature of the data. Unless otherwise indicated in the individual tables, the definitions for civilian population, resident population, and total population are those given by the U.S. Bureau of the Census. Civilian population includes the civilians in the 50 States and the District of Columbia. Resident population includes the civilian population plus the Armed Forces in the United States. Total population includes the resident population, plus the Armed forces overseas, but does not include the civilians in U.S. Possessions (Puerto Rico, Virgin Islands, Canal Zone, and Pacific Islands).

There are other variations in the populations used. For example, in the data on the supply of physicians (M.D.'s) and of pharmacists, the counts of personnel include those in U.S. Possessions (which is not the case for any other occupations). Addition of the civilians in U.S. Possessions to the total population was therefore required to obtain valid ratios of M.D.'s and pharmacists to population.

The reader will also note slight variations in the ratios of health personnel to population in the national trend data and in State by State data for 1970, 1975, and 1980, for each of the health occupations. These variations are the result of differences in one or more types of data, primarily: 1) differences in the count of health personnel (e.g., total, all active, active non-Federal); 2) inclusion or exclusion of health personnel and of populations in U.S. Possessions; 3) counts for different categories of population (e.g., total, civilian, resident); and 4) differences in the same category of population, depending on whether the count is as of July 1 or December 31.

It is necessary to use a July 1 population count (instead of December 31) for the State by State personnel-to-population ratios for the health occupations in 1970, 1975, and 1980. The July 1 population is used because that is the closest date for which the U.S. Bureau of the Census provides population estimates by individual States, divisions, and regions. The civilian population as of July 1 is used for computation of personnel-to-population ratios in the tables for State by State data for physicians (M.D.'s and D.O.'s) because Federal personnel are excluded, and for dentists because Armed Forces personnel are excluded. Resident population as of July 1 is used for all the other occupations because the counts include Federal personnel.

The statistical data given in the report for the eight health occupations represent the best estimates it was possible to make, in light of the available data. When currently available data are updated, or more accurate or detailed data become available, these will be taken into account to revise the estimates presented in this report.

Following is a narrative Overview section which presents illustrative data highlights from the statistical tables, but without reference to any individual table. After the Overview, there is the List of Tables, grouped according to the eleven sections of this report. The main part of the report--the statistical tables--then follows, section by section, with no supporting text.

Overview

The number of personnel in all eight health occupations covered in this report increased significantly during the 1950-1980 period, as did also the personnel-to-population ratio. However, there was a great deal of variation in the pattern and scale of these increases.

Registered nurses were in the vanguard in the large and steady increase of personnel; their ratio to population more than doubled between 1950 and 1980. The next largest proportional increase was among veterinarians, who almost doubled their ratio to population. The trend for physicians (M.D.'s) was also characterized by a notable increase in supply over the three decades. The increase in number of physicians was comparatively small from 1950 to 1965, but the rate of increase accelerated significantly from 1965 to 1980.

In the years 1950-1965, the number of osteopathic physicians, dentists, optometrists, pharmacists, and podiatrists all grew less than did the population. However, the mid-1960's generally marked a turning point in the supply trend of these occupations. From 1965 to 1980, personnel increases for all of these occupations exceeded the rate of population growth and, for some of them, by a considerable amount.

Despite the overall increase in number and ratio to population of personnel in all eight health occupations, there is still a considerably uneven distribution, although to varying degrees, as is evident in data both by region and by metropolitan/non-metropolitan areas.

Among the regions, the Northeast had, in 1980, the best supply in relation to population for several health occupations: Physicians (M.D.'s), dentists, podiatrists, and registered nurses. The South generally had much less favorable ratios and had, or shared, the least favorable regional ratio for six of the eight health occupations in this report. Osteopathic physicians (D.O.'s) and podiatrists are the most maldistributed practitioners among the regions. Only pharmacists were relatively evenly distributed among all regions, in relation to population.

As between metropolitan areas and non-metropolitan counties, there were also uneven distributions of most health personnel, ranging in 1979 from relatively minor disparities to considerable differences. The greatest disparity was for the occupation with the smallest number of practitioners--podiatrists; their ratio per 100,000 population was 4.6 for metropolitan areas and only 1.5 for non-metropolitan. The next greatest disparity occurred with physicians (M.D.'s); their ratio of 213 per 100,000 population in metropolitan areas was more than double the ratio in non-metropolitan counties. In contrast, there was a much more even distribution of personnel in two of the health occupations in 1979--for pharmacists, distribution was relatively even, with 65 per 100,000 population for metropolitan areas and 57 for non-metropolitan; for optometrists, it was virtually the same with 9.8 and 9.7.

Because of inadequate supplies of health personnel, many parts of the country have been Federally-designated as health manpower shortage areas, with an indicated need for various numbers of additional practitioners of the different health occupations. It was estimated that, by the end of 1980, 5,835 additional physicians were needed to provide primary patient care in 1,921 designated shortage areas, in order for the shortage-area designations

to be removed. Similarly, there was an estimated need for 2,442 additional dentists for removal of the shortage area designations from 916 areas. The needs for additional practitioners in some health occupations were at much lower levels; for example, 174 additional pharmacists were needed for 132 designated shortage areas.

An important aspect of manpower supply is distribution of active personnel by age. In 1980, there were considerable variations in the age levels of the various health occupations. Registered nurses were the youngest group, with a median age of 38 years. Pharmacists also constituted a rather young work force, with a median age of 39. The practitioners with the highest median age were optometrists, at 48; this group had more than one-third of its active personnel aged 55 or over.

Physicians (M.D.'s)

The total number of physicians (M.D.'s) in the United States and its Possessions increased considerably from 219,997 in 1950 to an estimated 460,500 in 1980. There has also been a considerable increase in active physicians from 208,997 in 1950 to an estimated 1980 count of 429,800 (including some 20,000 in Federal service). However, the ratio of active physicians to population held steady at 134 per 100,000 throughout the 1950's and only began to increase during the 1960's, eventually reaching an estimated ratio of 189 active physicians per 100,000 population in 1980.

At the time of the preparation of this report, detailed data on the total and active supply of physicians (M.D.'s) were available from the American Medical Association only through 1978. Total and active physician counts for 1979 and 1980 were estimated in order to obtain physician data comparable with counts for the other health occupations. (The 1979 A.M.A. data became available subsequent to compilation of the statistical tables for this report, and thus 1979 estimates presented herein differ somewhat from the most recent A.M.A. data.) In addition, the number of active physicians for the years 1975 through 1980 were adjusted to include about 90 percent of physicians either with address unknown or not classified as to status or activity by A.M.A. All "adjusted" data are so identified on every table where such data appear.

Among the regions, the 1980 estimated distribution of active non-Federal physicians is rather uneven, with the best ratio, 225 physicians per 100,000 population, in the Northeast, followed by the West. The North Central ratio was considerably lower and the South was lowest with 159 per 100,000.

On a national basis, over the past decade, the distribution of active non-Federal physicians has been quite unequal between metropolitan areas and non-metropolitan counties. In 1970, the metropolitan ratio was 166 physicians per 100,000 population and the non-metropolitan ratio was 75; by 1979, these respective ratios were estimated at 213 and 90.

Physicians active in primary patient care, as identified in this report, are those in general and family practice and in the two specialties of internal medicine and pediatrics. The number of primary-care physicians increased from 113,090 in 1965 to an estimated 166,640 in 1980, while the ratio increased from 57 to 73 per 100,000 population. This increase is accounted for entirely by internal medicine and pediatrics, since physicians in general and family practice actually declined both in number and in physician-to-population ratio.

Physicians active in the medical specialties group increased from 61,435 in 1965 to an estimated 131,570 in 1980, more than doubling in number and almost doubling the ratio to population from 31 to 58 per 100,000. Physicians active in the surgical specialties group increased less steeply from 73,185 to an estimated 113,130, with the ratio rising from 37 to 50 per 100,000 population. In 1980, there were an estimated 123,480 physicians in all "other specialties," considered as a group, a sizeable increase over the 1965 level.

Foreign medical graduates (FMG's) have come to comprise an increasingly large proportion of physicians in the United States. Exclusive of graduates of Canadian medical schools, FMG's numbered an estimated 94,600 in 1979, or 21 percent of the total supply. FMG's are especially prominent among active practitioners of certain medical specialties (e.g., anesthesiology) and are less prominent in general and family practice.

In 1978, of about 375,800 active physicians (M.D.'s), 91 percent were providing patient care, of whom 64 percent were office-based and 27 percent were hospital-based. Among the others, 3 percent each were employed in administration and in research, and 2 percent in medical teaching. Foreign medical graduates figured prominently in all of these groups, but especially among hospital-based physicians and physicians in research.

Active women M.D.'s in 1978—about 35,500—represented 9 percent of all physicians active in patient care, and 11 percent of physicians active in teaching, administration, research and other activities. Women are relatively well represented in the medical specialties and other specialties, and least represented in surgical specialties.

In 1979, the average number of patient visits to physicians (M.D.'s) per week was 123, ranging from a high of 158 patients per week for general practitioners to a low of 57 for psychiatrists. The average number of patient visits also varied significantly between the largest metropolitan areas (of 1,000,000 or more population) and non-metropolitan counties, with 109 and 153 visits per week respectively.

The average number of hours per week in physician (M.D.) practice in 1979 was 50, of which 45 were devoted to direct patient care. The average number of weeks of practice in 1978 was 47.

The average patient waiting time in 1979 for a new patient to be given a physician's appointment was 4 days for a specific complaint and 9 days for a routine visit. The average waiting time for the patient in the physician's office was 21 minutes.

The average net income physicians received from medical practice increased from \$41,800 in 1970 to an estimated \$68,600 in 1979. Average net income for general practitioners in 1979 reached \$55,500, and for specialists it ranged from a high of \$86,600 for surgeons to a low of \$53,200 for psychiatrists. However, the net income for all physicians, when adjusted for the effects of inflation, actually declined 12 percent from 1970 to 1979.

Osteopathic Physicians (D.O.'s)

The total number of osteopathic physicians increased from 12,700 in 1950 to 18,820 by 1980--of whom 17,670 were active. After a period of decline, the ratio of active osteopaths to population rose to an estimated 7.9 per 100,000 population in 1980, slightly higher than the level had been in 1950.

Among the regions, the 1980 distribution of active non-Federal osteopaths varied greatly. The North Central ratio of 12.5 osteopaths per 100,000 population was nearly triple the 4.3 ratio of the South and West.

About 80 percent of active osteopaths are employed in patient care, most of them office-based and comparatively few practicing in hospitals. Eleven percent are interns, residents, or in other advanced training.

Dentists

At the end of 1980, there were a total of 141,280 dentists, of whom 126,240 were active, with about 5,000 serving in the Armed Forces. The 79,190 active dentists in 1950 represented a ratio of 52 per 100,000 population. This ratio declined to a low of 49 in 1965, after which there was a steady increase to the present level of 56 per 100,000.

In 1980, the distribution of active civilian dentists varied considerably from 65 and 64 dentists per 100,000 population for the Northeast and West, respectively, to a ratio of 44 per 100,000 in the South. On a national basis, there is a similar variation in ratios, with 60 active civilian dentists per 100,000 population in metropolitan areas, compared with 37 per 100,000 in non-metropolitan counties.

The number of dental specialists increased from 9,322 in 1970 to 17,160 in 1980, representing an increase in ratio to population from 4.5 specialists per 100,000 population to 7.7 per 100,000.

About 87 percent of active dentists are in private practice. The others are distributed among various types of employment, including 4 percent in the Armed Forces and 3 percent on dental school faculties.

Independent dentists averaged 79 patient visits per week in 1977. In 1978, the average net income was \$44,071 for general practitioners and \$63,020 for dental specialists--in both instances for independent dentists in solo practice.

Optometrists

The increase in number of active optometrists from 14,750 in 1950 to 22,330 in 1980 no more than kept pace with the increase in population. In 1980 the ratio of active optometrists was 10 per 100,000 population, the same as in 1950. Among the regions, the West had the most favorable ratio of 12 and the South had the lowest ratio of 8.

Pharmacists

The number of active pharmacists in the United States and its Possessions increased steadily from 88,300 in 1950 to 144,260 in 1980. The trend of the ratio of pharmacists to population was more uneven; the ratio rose gradually to 63 per 100,000 population in 1980, after it had declined for some years from the 1950 level of 57.

The distribution of active pharmacists in 1980 was rather even among the regions, with a low in the Northeast of 61 per 100,000 population and a high of 68 in the North Central region.

Podiatrists

Between 1950 and 1980 the number of active podiatrists rose from 6,400 to 8,880. However, the 1980 ratio of 4 podiatrists per 100,000 population was virtually the same as it was in 1950. Podiatrists are unevenly distributed among the regions, ranging from a high of 6.3 per 100,000 population in the Northeast to a low of 2.5 in the South.

Veterinarians

From 1950 to 1980, the supply of active veterinarians grew at a steady rate, both in number, from 13,500 to 36,000, and in ratio to population, from 9 to 16 veterinarians per 100,000 population. There is a somewhat sizeable variation in regional distribution of veterinarians, from a low of 11 per 100,000 population in the Northeast to a high of 20 per 100,000 in the North Central region.

More than half (53 percent) of all veterinarians are self-employed and another 25 percent are private-practice employees. The others are distributed among colleges, industry, Federal, State, and local government, and the Armed Forces.

Registered Nurses

There has been a great increase in the number of active registered nurses in recent decades—from 335,000 in 1950 to 1,164,000 in 1980—attaining the present ratio of 520 active nurses per 100,000 population. Estimating the full-time equivalency of the part-time nurse work force and adding them to the count of full-time nurses provides a full-time equivalent of 984,000 active registered nurses in 1980, or 440 full-time equivalent nurses per 100,000 population.

There was a considerable variation in regional distribution in 1980, ranging from 620 active nurses per 100,000 population in the Northeast to 424 per 100,000 in the South.

List of Tables

B-5. Number of Physicians (M.D.'s) Active in Primary Patient Care and Primary-Care-Physician-to-Population Ratios, by Type of Practice: December 31, Selected Years, 1965-1978, and Adjusted Data for 1978-1980	26
B-6. Number of Active Physicians (M.D.'s) and Physician-to-Population Ratios, by General and Specialty Practice: Selected Years, December 31, 1965-1978	27
B-7. Adjusted Number of Active Physicians (M.D.'s) and Physician-to-Population Ratios, by General and Specialty Practice: December 31, 1978, 1979, and 1980	28
B-8. Total Physicians (M.D.'s) by Country Where Graduated from Medical School: Selected Years, December 31, 1959-1979	29
B-9. All Active Physicians (M.D.'s) and Number and Percent Who Are Foreign Medical Graduates, by Type of Practice: December 31, 1970, 1975, and 1978	29
B-10. All Active Physicians (M.D.'s), and Number and Percent Who Are Foreign Medical Graduates, by General and Specialty Practice: December 31, 1978	30
B-11. Number and Percent Distribution of All Active Physicians (M.D.'s), and Number and Percent Who Are Foreign Medical Graduates, by Activity and Place of Practice: December 31, 1978	31
B-12. Number and Percent Distribution of All Active Physicians (M.D.'s), and Number and Percent Who Are Female, by Activity and Specialty Group: December 31, 1978	31
B-13. Extent of Physician (M.D.) Professional Activity in Average Number of Patient Visits, Hours, and Weeks, by Type of Practice: 1970 and 1979	32
B-14. Average Number of Patient Visits per Week and of Hours of Physician (M.D.) Practice Per Week, in Metropolitan Areas and Non-Metropolitan Counties, by Type of Practice: 1979	32
B-15. Average Patient Waiting Time for Physician (M.D.) Appointment and Waiting Time in Physician's Office, by Type of Practice: 1979	33

B. Physicians (M.D.'s) - Continued

<u>Table No.</u>	<u>Page</u>
B-16. Average Patient Waiting Time for Physician (M.D.) Appointment and Waiting Time in Physician's Office, by Metropolitan Areas and Non-Metropolitan Counties: 1979	33
B-17. Average Net Income of Physicians (M.D.'s) from Medical Practice, Actual and Adjusted for Inflation, by Type of Practice: 1970, 1975, and 1979	34

C. Osteopathic Physicians (D.O.'s)

C-1. Total and Active Osteopathic Physicians (D.O.'s) and Osteopathic Physician-to-Population Ratios: Selected Years, December 31, 1950-1980	36
C-2. Number and Percent Distribution of Active Osteopathic Physicians (D.O.'s), by Occupational Status: December 31, 1980	36
C-3. Number of Active Non-Federal Osteopathic Physicians (D.O.'s) and Osteopathic Physician-to-Population Ratios, by Region, Division, and State: December 31, 1970, 1975, and 1980	37

D. Dentists

D-1. Total and Active Dentists and Dentist-to-Population Ratios: Selected Years, December 31, 1950-1980	39
D-2. Number of Active Civilian Dentists and Dentist-to-Population Ratios, by Region, Division, and State: December 31, 1970, 1975, and 1980	40
D-3. Ratio of Active Civilian Dentists to Population in Metropolitan Areas and Non-Metropolitan Counties, by Region, Division, and State: December 31, 1979	41
D-4. Number of Active Dentists and Dentist-to-Population Ratios, by General and Specialty Practice: December 31, 1970, 1975, and 1980	42
D-5. Primary Type of Dental Employment of Active Dentists, by Sex: December 31, 1980	42
D-6. Number of Patient Visits per Week of Independent Dentists Practicing Alone, by Age Group: 1977	43
D-7. Average Income of Independent Dentists, by General and Specialty Practice: Selected Years 1964-1978	43

E. Optometrists

<u>Table No.</u>	<u>Page</u>
E-1. Number of Active Optometrists and Optometrist-to-Population Ratios: Selected Years, December 31, 1950-1980	45
E-2. Number of Active Optometrists and Optometrist-to-Population Ratios, by Region, Division, and State: December 31, 1970, 1975, and 1980	46

F. Pharmacists

F-1. Number of Active Pharmacists and Pharmacist-to-Population Ratios: Selected Years, December 31, 1950-1980	48
F-2. Number of Active Pharmacists and Pharmacist-to-Population Ratios, by Region, Division, and State: December 31, 1970, 1975, and 1980	49

G. Podiatrists

G-1. Number of Active Podiatrists and Podiatrist-to-Population Ratios: Selected Years, December 31, 1950-1980	51
G-2. Number of Active Podiatrists and Podiatrist-to-Population Ratios, by Region, Division, and State: December 31, 1970, 1975, and 1980	52

H. Veterinarians

H-1. Number of Active Veterinarians and Veterinarian-to-Population Ratios: Selected Years, December 31, 1950-1980	54
H-2. Number of Active Veterinarians and Veterinarian-to-Population Ratios, by Region, Division, and State: December 31, 1970, 1975, and 1980	55
H-3. Number and Percent Distribution of Active Veterinarians, by Type of Employer: December 31, 1980	56

I. Registered Nurses

I-1. Active Registered Nurses, Full Time, Part Time, and Full-Time Equivalents, and Nurse-to-Population Ratios: Selected Years 1950-1980	58
I-2. Number of Active Registered Nurses and Nurse-to-Population Ratios, by Region, Division, and State: 1970, 1975, and 1980	59

J. Appendix I. Physician (M.D.) Specialists, by State

Table No.

Page

J-1. Number of Active Non-Federal Physicians (M.D.'s) and Physician-to-Population Ratios, by General and Selected Specialty Practice, by Region: December 31, 1970 and 1978	61
J-2. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in General and Family Practice, by Region, Division, and State: December 31, 1970, 1975, and 1978	62
J-3. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Internal Medicine and Related Specialties, by Region, Division, and State: December 31, 1970, 1975, and 1978	63
J-4. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Pediatrics, by Region, Division, and State: December 31, 1970, 1975, and 1978	64
J-5. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Surgical Specialties, by Region, Division, and State: December 31, 1970, 1975, and 1978	65
J-6. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Obstetrics and Gynecology, by Region, Division, and State: December 31, 1970, 1975, and 1978	66
J-7. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Psychiatry, by Region, Division, and State: December 31, 1970, 1975, and 1978	67
J-8. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Anesthesiology, by Region, Division, and State: December 31, 1970, 1975, and 1978	68
J-9. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Radiology, by Region, Division, and State: December 31, 1970, 1975, and 1978	69
J-10. Number and Ratio to Population of Active Non-Federal Physicians (M.D.'s) in Pathology, by Region, Division, and State: December 31, 1970, 1975, and 1978	70

K. Appendix II. Designated Shortage Areas

K-1. Number of Health Occupation Shortage Areas Designated in Metropolitan Areas and Non-Metropolitan Counties, and Additional Practitioners Needed, for Selected Health Occupations: December 31, 1980	72
---	----

K. Appendix II. Designated Shortage Areas - Continued

<u>Table No.</u>	<u>Page</u>
K-2. Number of Designated Primary-Care Physician Shortage Areas, and Additional Primary-Care Physicians Needed to Remove Shortage-Area Designation and to Achieve Target Ratio, by Region, Division, and State: December 31, 1980	73
K-3. Number of Designated Dentist Shortage Areas, and Additional Dentists Needed to Remove Shortage-Area Designation and to Achieve Target Ratio, by Region, Division, and State: December 31, 1980	74

A. Multiple Occupations

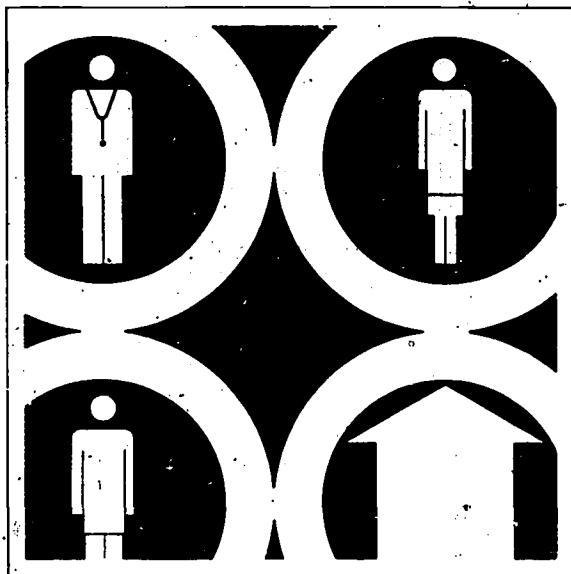

Table A-1
NUMBER OF ACTIVE HEALTH PERSONNEL, BY OCCUPATION, AND RESPECTIVE RATIOS TO POPULATION:
SELECTED YEARS, DECEMBER 31, 1950-1980 1/

Active health personnel 2/	1950		1965		1970		1975		1980	
	Number	Personnel per 100,000 population	Number	Personnel per 100,000 population						
Physicians	219,897	140.9	288,675	145.5	323,185	154.5	377,350	173.1	447,470	196.3
M.D.'s 3/	208,997	134.0	277,575	139.9	310,845	148.7	363,290	166.7	429,800	188.6
D.O.'s	10,900	7.1	11,100	5.7	12,340	6.0	14,060	6.6	17,670	7.9
Dentists	79,190	51.5	95,990	49.0	102,220	49.6	112,020	52.2	126,240	56.3
Optometrists	14,750	9.6	17,300	8.8	18,400	8.9	19,940	9.3	22,330	10.0
Pharmacists 3/	88,300	56.6	104,100	52.5	113,700	54.4	122,480	56.2	144,260	63.3
Podiatrists	6,400	4.2	7,600	3.9	7,110	3.4	7,260	3.4	8,880	4.0
Veterinarians	13,500	8.8	23,300	11.9	25,900	12.6	31,050	14.5	36,000	16.1
Registered nurses 5/	335,000	218.1	621,000	317.6	750,000	363.9	961,000	448.1	1,164,000	519.9

1/ All ratios are based on total population, except ratios for physicians (M.D.'s) and pharmacists, which are based on total population plus civilian population in U.S. Possessions, i.e., Puerto Rico, Virgin Islands, Canal Zone, and Pacific Islands.

2/ Includes health personnel in Federal service.

3/ Includes physicians (M.D.'s) and pharmacists in U.S. Possessions.

4/ Numbers for 1975 and 1980 are adjusted.

5/ Numbers of nurses are actually as of January 1 of the year following the year listed.

SOURCE: For sources of data, see the respective trend table for each occupation on estimated number of active personnel and personnel-to-population ratios.

Table A-2
NUMBER OF ACTIVE HEALTH PERSONNEL, BY OCCUPATION, AND RESPECTIVE RATIOS TO POPULATION,
BY REGION: DECEMBER 31, 1970 AND 1980 1/

Active health personnel	Number of active personnel	1970					Number of active personnel	1980					
		Active personnel per 100,000 population						Active personnel per 100,000 population					
		All regions	North-east	North Central	South	West		All regions	North-east	North Central	South	West	
Physicians 2/	290,862	142.7	185.0	127.5	114.8	158.2	422,310	191.4	233.6	175.0	163.7	212.3	
M.D.'s 3/	279,212	137.0	178.7	118.2	111.5	154.8	405,800	183.9	224.9	162.5	159.4	208.0	
D.O.'s	11,650	5.7	6.3	9.3	3.3	3.4	16,510	7.5	8.7	12.5	4.3	4.3	
Dentists 2/	95,680	47.4	58.9	46.3	35.3	54.9	121,240	54.9	65.2	53.1	44.4	63.7	
Optometrists	18,400	9.0	9.7	10.3	6.6	10.5	22,330	10.1	10.2	11.2	8.0	12.3	
Pharmacists 3/	112,570	55.4	60.1	57.4	50.6	52.9	142,780	64.7	60.8	67.7	65.0	64.6	
Podiatrists	7,110	3.5	6.0	3.6	1.6	3.0	8,880	4.0	6.3	3.9	2.5	4.1	
Veterinarians	25,900	12.7	8.3	16.1	11.8	15.0	36,000	16.3	10.8	19.9	16.0	18.5	
Registered nurses 5/	750,000	368.9	491.2	367.5	281.8	355.9	1,164,000	520.1	620.3	547.4	423.8	529.7	

1/ All ratios for physicians (M.D.'s and D.O.'s) and dentists are based on civilian population; ratios for all other listed health occupations are based on resident population.

2/ Excludes physicians (M.D.'s and D.O.'s) in all Federal service; excludes dentists in military service.

3/ Excludes physicians (M.D.'s) and pharmacists in U.S. Possessions.

4/ Number for physicians (M.D.'s) is adjusted for 1980.

5/ Data for nurses are actually as of January 1 of 1971 and 1981 respectively.

SOURCE: For sources of data, see the respective trend table with estimated number of personnel and personnel-to-population ratio for each occupation, by region, division, and State.

^{1/} All ratios for physicians (M.D.'s and D.O.'s) and dentists are based on civilian population; ratios for all other listed health occupations are based on resident population.

^{2/} Computation of ratios excludes physicians (M.D.'s and D.O.'s) in all Federal service and excludes dentists in military service.

^{3/} Data for nurses are actually as of January 1, 1980.

SOURCE: Estimated by Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis, based on the distribution of the respective occupational groups as provided in the latest data collected.

Table A-5
PERCENT DISTRIBUTION OF ACTIVE HEALTH PERSONNEL, BY OCCUPATION,
IN METROPOLITAN AREAS AND NON-METROPOLITAN COUNTIES: DECEMBER 31, 1979

Population and active health personnel	Percent distribution										
	Metropolitan areas, by population						Non-metropolitan counties, by size of central city

1/ Numbers of active physicians for 1975 and 1978 are adjusted to include about 90 percent of those either with unknown address or not classified as to status or activity by the American Medical Association.

2/ Excludes counts of physicians in U.S. Possessions.

3/ Non-metropolitan counties are classified by county population.

SOURCE: Data for 1970 (unadjusted) from American Medical Association, Center for Health Services Research and Development. Physician Distribution and Medical Licensure in the U.S., 1970.

Adjusted data for 1975 and 1978 from Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis.

1/ Numbers for all years are adjusted to include most physicians whose address or activity status are unknown. The adjusted numbers for 1979 and 1980 are based on estimates.

2/ Includes physicians in Federal service; also includes physicians in U.S. Possessions.

3/ Ratios are based on total population plus civilian population in U.S. Possessions.

4/ Includes allergy, cardiovascular diseases, dermatology, gastroenterology, pediatric allergy, pediatric cardiology, and pulmonary diseases.

5/ Includes neurological surgery, otolaryngology, plastic surgery, colon and rectal surgery, thoracic surgery, and urology.

6/ Includes forensic pathology.

7/ Includes child psychiatry.

8/ Includes both diagnostic and therapeutic radiology.

9/ Includes aerospace medicine, neurology, occupational medicine, physical medicine and rehabilitation, public health, general preventive medicine, other specialties, and unspecified.

SOURCE: Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis.

Table B-8
TOTAL PHYSICIANS (M.D.'S) BY COUNTRY WHERE GRADUATED FROM MEDICAL SCHOOL:
SELECTED YEARS, DECEMBER 31, 1959-1979

Year	Total physicians 1/		Where graduated from medical school					
			United States		Canada		Other foreign	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
1959	240,797	100.0	220,222	91.5	5,421	2.2	15,154	6.3
1963	275,140	100.0	238,571	86.7	5,644	2.1	30,925	11.2
1967	306,970	100.0	255,104	83.1	6,050	2.0	45,816	14.9
1970	334,028	100.0	270,637	81.0	6,174	1.9	57,217	17.1
1975	393,742	100.0	306,413	77.8	6,481	1.7	80,848	20.5
1976	409,446	100.0	317,153	77.5	6,670	1.6	85,623	20.9
1977	421,278	100.0	327,799	77.8	6,690	1.6	86,789	20.6
1978	437,486	100.0	340,035	77.7	6,100	1.4	91,351	20.9
1979 2/	450,800	100.0	350,300	77.7	5,900	1.3	94,600	21.0

1/ Includes physicians in Federal service; also includes physicians in U.S. Possessions.

2/ All counts of physicians in 1979 are estimated.

SOURCE: Data for 1959 through 1977 from American Medical Association, Center for Health Services Research and Development. Physician Distribution and Medical Licensure in the U.S., 1977. Data for 1978 are from the subsequent edition of this same AMA report.

Data for 1979 from Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis.

Table B-9
ALL ACTIVE PHYSICIANS (M.D.'S) AND NUMBER AND PERCENT WHO ARE FOREIGN MEDICAL GRADUATES,
BY TYPE OF PRACTICE: DECEMBER 31, 1970, 1975, AND 1978 1/

Type of practice	1970			1975			1978

Table B-17
AVERAGE NET INCOME OF PHYSICIANS (M.D.'S) FROM MEDICAL PRACTICE,
ACTUAL AND ADJUSTED FOR INFLATION, BY TYPE OF PRACTICE: 1970, 1975, AND 1979

Type of practice	Average net income						Percent change 1970 to 1979	
	1970		1975		1979 ^{1/}			
	Actual	Adjusted ^{2/}	Actual	Adjusted ^{2/}	Actual	Adjusted ^{2/}	Actual	Adjusted
All practices ^{3/}	\$41,800	\$35,900	\$56,400	\$35,100	\$68,600	\$31,600	+64.1	-12.0
General practice	33,900	29,100	45,400	28,200	55,500	25,500	+63.7	-12.4
Internal medicine	40,300	34,700	57,000	35,400	66,800	30,700	+65.8	-11.5
Surgery	50,700	43,600	68,200	42,300	86,600	39,800	+70.8	-8.7
Pediatrics	34,800	29,900	44,300	27,500	54,400	25,000	+56.3	-16.4
Obstetrics/gynecology	47,100	40,500	63,300	39,300	73,600	35,900	+56.3	-16.3
Psychiatry	39,900	34,300	44,800	27,800	53,200	24,500	+33.3	-28.6

^{1/} Projected by respondents.

^{2/} Consumer price index for all items (base 1967 = 100) are as follows: for 1970, 116.3; for 1975, 161.2; for 1979, 217.4; data are annual averages.

^{3/} Included are net incomes of physicians whose specialties were classified as Radiology, Anesthesiology, and "Other".

SOURCE: Actual income from American Medical Association, Center for Health Services Research and Development. Profile of Medical Practice, 1980.

Adjusted income and percent change from Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis.

Consumer price indices from U.S. Department of Labor, Bureau of Labor Statistics.

C. Osteopathic Physicians (D.O.'s)

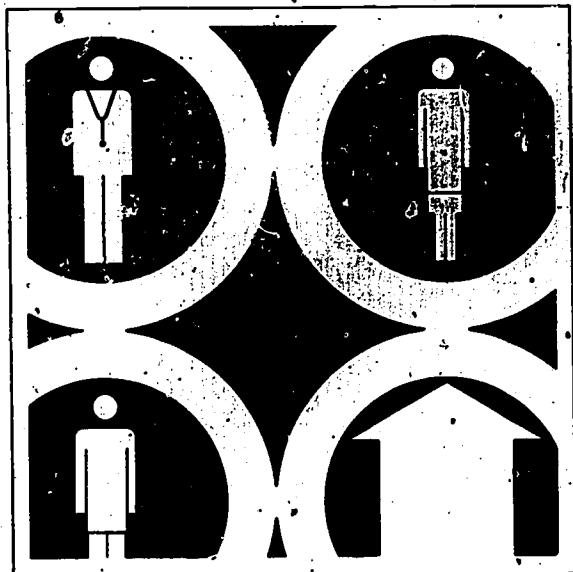

Table C-1
TOTAL AND ACTIVE OSTEOPATHIC PHYSICIANS (D.O.'S) AND OSTEOPATHIC
PHYSICIAN-TO-POPULATION RATIOS: SELECTED YEARS, DECEMBER 31, 1950-1980

Year	Number of osteopathic physicians ^{1/}		Total population (thousands)	Osteopathic physicians per 100,000 population		Active non-Federal osteopathic physicians	Civilian population (thousands)	Active non-Federal osteopathic physicians per 100,000 civilian population
	Total	Active		Total	Active			
1950	12,700	10,900	153,622	8.3	7.1	9,900	151,238	6.5
1955	13,500	11,600	167,513	8.1	6.9	10,500	164,597	6.4
1960	14,350	12,160	182,287	7.9	6.7	11,030	179,742	6.1
1965	13,030	11,100	195,539	6.7	5.7	10,000	192,638	5.2
1970	14,030	12,340	206,076	6.8	6.0	11,650	203,109	5.7
1975	15,300	14,060	214,446	7.1	6.6	13,370	212,308	6.3
1976	15,570	14,660	216,022	7.2	6.8	13,980	213,889	6.5
1977	16,260	15,360	217,739	7.5	7.1	14,400	215,620	6.7
1978	17,040	16,100	219,484	7.8	7.4	15,100	217,389	6.9
1979	17,860	16,870	221,195	8.1	7.6	15,710	219,100	7.2
1980	18,820	17,670	223,870	8.4	7.9	16,510	221,725	7.4

1/ Includes osteopathic physicians in Federal service.

SOURCE: Data for 1950 through 1965 from U.S. Department of Health, Education, and Welfare, National Center for Health Statistics, Health Resources Statistics 1965, PHS Publication No. 1509, 1966, and Health Resources Statistics 1976-77, DHEW Publication No. (PHS) 79-1509, 1979.

Data for 1970 through 1980 estimated by Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis.

U.S. Bureau of the Census. Current Population Report P-25, Nos. 438, 542, and 812.

Table C-2
NUMBER AND PERCENT DISTRIBUTION OF ACTIVE OSTEOPATHIC
PHYSICIANS (D.O.'S), BY OCCUPATIONAL STATUS: DECEMBER 31, 1980¹

Occupational status	Active osteopathic physicians	
	Number	Percent distribution
All active	17,670	100.0
Patient care	14,210	80.4
Office-based	12,230	69.2
Hospital-based	410	2.3
Government institutions	1,220	6.9
Academic and religious institutions	350	2.0
Advanced training	2,010	11.4
Interns	810	4.6
Residents	880	5.0
Other	320	1.8
Not in patient care or in training	1,450	8.2

SOURCE: Estimated by Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis, based on data from the American Osteopathic Association, Task Force on Graduate Osteopathic Medical Education.

Table C-3
NUMBER OF ACTIVE NON-FEDERAL OSTEOPATHIC PHYSICIANS (D.O.'S) AND OSTEOPATHIC
PHYSICIAN-TO-POPULATION RATIOS, BY REGION, DIVISION, AND STATE: DECEMBER 31, 1970, 1975, AND 1980

I. Registered Nurses

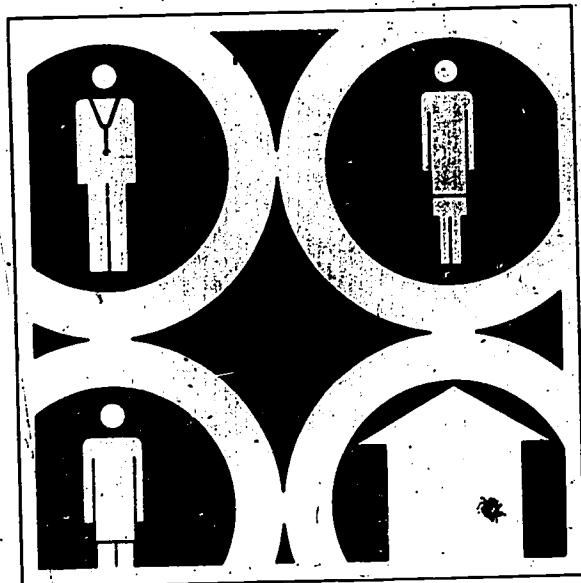

Table I-1
ACTIVE REGISTERED NURSES, FULL TIME, PART TIME, AND FULL-TIME EQUIVALENTS,
AND NURSE-TO-POPULATION RATIOS: SELECTED YEARS 1950-1980

Year (date shifted) <u>1/</u>	Number of active registered nurses <u>2/</u>				Total population (thousands)	Active registered nurses per 100,000 population	
	Full time	Part time	All active	Full-time equivalent		All active	Full-time equivalent
1950	299,000	36,000	335,000	317,000	153,622	218.1	206.4
1955	388,000	42,000	430,000	409,000	167,513	256.7	244.2
1960	424,000	103,000	527,000	476,000	182,287	289.1	261.1
1965	466,000	155,000	621,000	544,000	195,539	317.6	278.2
1970	534,000	216,000	750,000	642,000	206,076	363.9	311.5
1975 <u>3/</u>	682,000	279,000	961,000	822,000	214,446	448.1	383.3
1976 <u>3/</u>	675,000	306,000	981,000	828,000	216,022	454.1	383.3
1977	708,000	320,000	1,028,000	868,000	217,739	472.1	398.6
1978	741,000	334,000	1,075,000	908,000	219,484	489.8	413.7
1979	772,000	347,000	1,119,000	946,000	221,195	505.9	427.7
1980	804,000	360,000	1,164,000	984,000	223,870	519.9	439.5

1/ The dates are actually January 1 of the year following the year listed (rather than January 1 of the year listed) to achieve greatest comparability with the December 31 data for other health occupations in this report.

2/ Includes registered nurses in Federal service.

3/ The disruption between data trends up to 1975 and data trends after 1975 occurs because of a change of methodology for estimating nurse supply.

SOURCE: Number of all active nurses for 1950 from Inventory of Professional Registered Nurses, American Nurses' Association, 1951. (Full time, part time, and full-time equivalent data estimated by Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis.)

Number of all active, full time, and part time nurses for 1955, 1965, 1970, and 1975 from Interagency Conference on Nursing Statistics, 1976. (Full-time equivalent data estimated by HRA, BHPr, Division of Health Professions Analysis.)

Counts of nurses for 1960 estimated by HRA, BHPr, Division of Health Professions Analysis, based on data from Interagency Conference on Nursing Statistics, 1976.

Counts of nurses for 1976 through 1980 estimated by HRA, BHPr, Division of Health Professions Analysis.

U.S. Bureau of the Census. Current Population Report P-25, Nos. 438, 542, and 812.

1/ Because the time period for count of nurses has traditionally been different from that of other health occupations, numbers for nurses are actually as of the start of the year after the year given.

SOURCE: Estimated by Health Resources Administration, Bureau of Health Professions, Division of Health Professions Analysis, based on data from HRA, BHPr, Division of Nursing.

J. Appendix I. Physician (M.D.) Specialists, by State

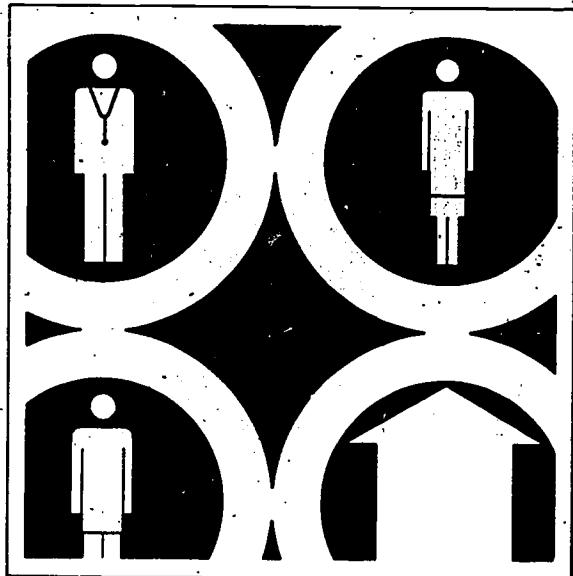

Table J-1
NUMBER OF ACTIVE NON-FEDERAL PHYSICIANS (M.D.'S) AND PHYSICIAN-TO-POPULATION RATIOS, BY GENERAL AND SELECTED SPECIALTY PRACTICE,
BY REGION: DECEMBER 31, 1970 AND 1978

Type of physician practice	Number of active non-Federal physicians	1970					1978					
		Active non-Federal physicians per 100,000 population					Number of active non-Federal physicians	Active non-Federal physicians per 100,000 population				
		All regions	North-east	North Central	South	West		All regions	North-east	North Central	South	West
General and family practice	54,376	27.0	26.9	26.5	24.0	33.1	53,580	24.7	21.4	25.4	23.9	29.3

1/ Related specialties include allergy, cardiovascular diseases, gastroenterology, and pulmonary disease.

2/ Includes pediatric allergy and pediatric cardiology.

3/ Surgical specialties include general surgery, neurological surgery, ophthalmology, orthopedic surgery, otolaryngology, plastic surgery, colon and rectal surgery, thoracic surgery, and urology.

4/ Includes child psychiatry.

5/ Includes diagnostic radiology and therapeutic radiology.

Psychiatrists	218	58	160	26.6	*	*	*	*	*	*	*	*

* Data not available.

- 1/ The number of additional primary-care physicians required to meet a population-to-primary-care-physician ratio of 3,500:1 (3,000:1 where high needs are indicated) in all designated primary-care shortage areas, resulting in their removal from the list of designated primary-care shortage areas.
- 2/ The number of additional dentists required to meet a population-to-dentist ratio of 5,000:1 (4,000:1 where high needs are indicated) in all designated dentist shortage areas, resulting in their removal from the list of designated shortage areas.
- 3/ The number of additional vision-care practitioners needed to eliminate the difference between visits required and visits supplied, if each practitioner provides 3,000 visits per year.
- 4/ The difference between the number of pharmacists required under the shortage criteria and the current supply of pharmacists in the area.
- 5/ The number of additional foot-care practitioners needed to meet a population-to-practitioner ratio of 28,000:1.
- 6/ The number of additional food animal veterinarians needed to meet a veterinary livestock-units-to-veterinarian ratio of 10,000:1.

1/ The estimated unserved population is computed by multiplying the number of practitioners in the area by the population-to-practitioner ratio required for designation, and subtracting this figure from the area population.

2/ The number of additional primary-care physicians required to meet a population-to-primary-care physician ratio of 3,000:1 (3,000:1 where high needs are indicated) in all designated primary-care shortage areas, resulting in their removal from the list of designated shortage areas.

3/ The number of additional primary-care physicians needed to meet a population-to-primary-care physician ratio of 2,000:1.
